# INDEX

## Who we are

Our story from our beginnings up until now.

4

## Private Labelling

End-to-end support for sourcing, processing, packaging, and branded honey supply.

17

## Our Ecosystem

Our full stack apiculture pipeline and services.

5

## Beekeeping Equipment

Essential equipment for hive management, honey extraction, and apiary setup.

20

## Certifications

Our certificates & compliance lists.

6

## Bee Farms & Livestock

Our full stack apiculture pipeline and services.

22

## Processing Facility

Our processing capabilities & more.

7

## Beekeeping Services

Apiculture Consulting  
Beefarm Visits  
Beebreeding & Livestock  
Managed Beefarms

23

## Packaging Capability

All the shapes & sizes we offer.

12

## Our Customers

Brands that trust us.

28

# WHO WE ARE

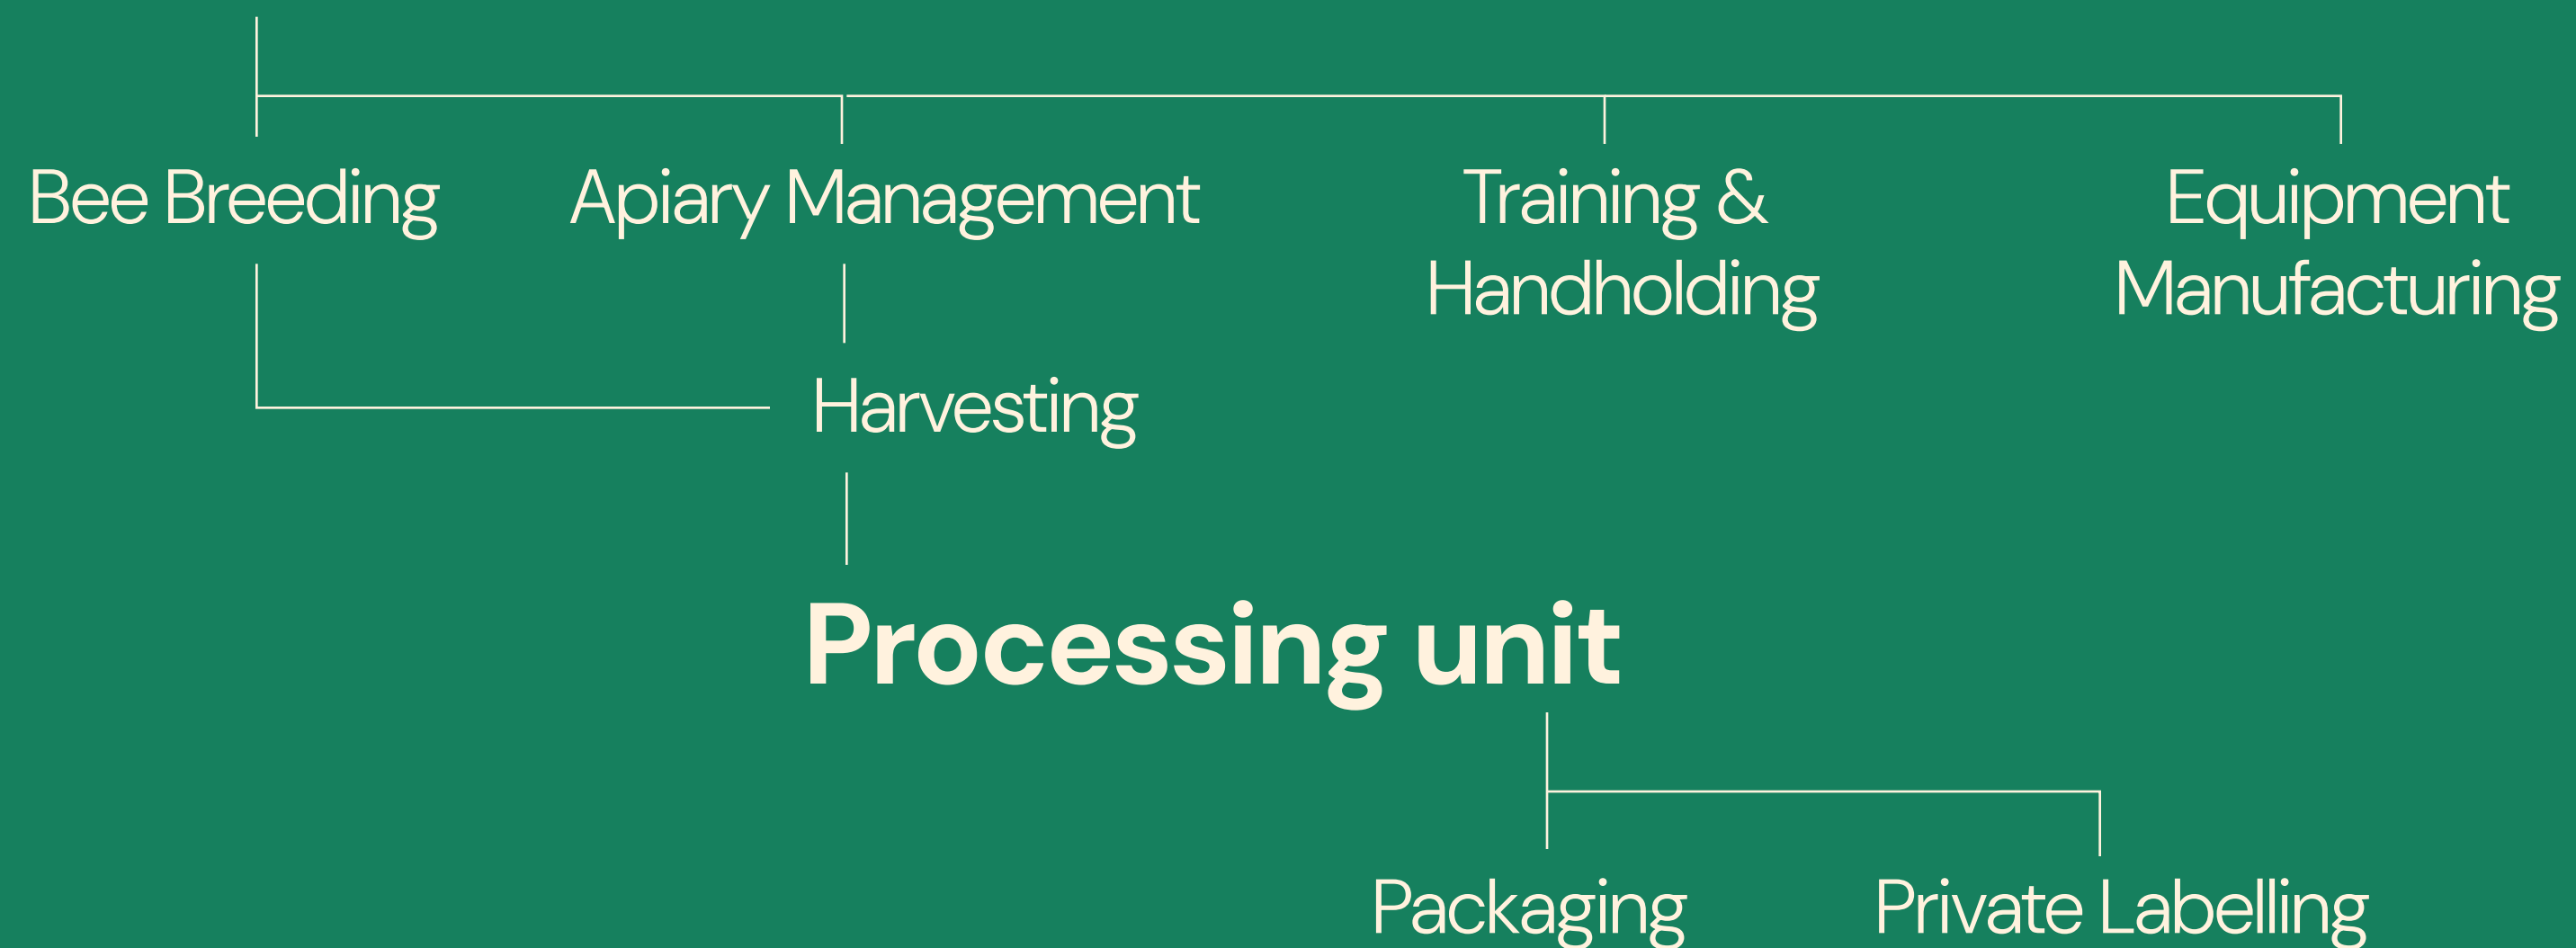

HoneyDay Bee Farms was founded by Guruprasad PR, with operations rooted in beekeeping work initiated in 2011 and formally established in 2016.. What started as a passion for bees became a mission to build a sustainable beekeeping community.

We train and support farmers, promote ethical practices, and ensure both bees and livelihoods thrive. From setting up & managing apiaries to offering expert guidance and high-quality honey, we're involved every step of the way.

Rooted in trust and community, we're proud to offer one of India's widest collections of ethically sourced honey.

## Our facility

We harvest raw honey from forests, farms, and remote plains, unpasteurised and free from additives. Each batch is traceable and comes straight from the hands of skilled, ethical beekeepers.

Our work supports small farmers, tribal beekeepers, and rural families across India. We train, equip, and create lasting livelihood models — because honey is sweeter when it uplifts the hands behind it.

# OUR ECOSYSTEM

## Existing

 FSSAI

 HACCP

 Jaivik Bharat

 USDA Organic

 ECOCERT

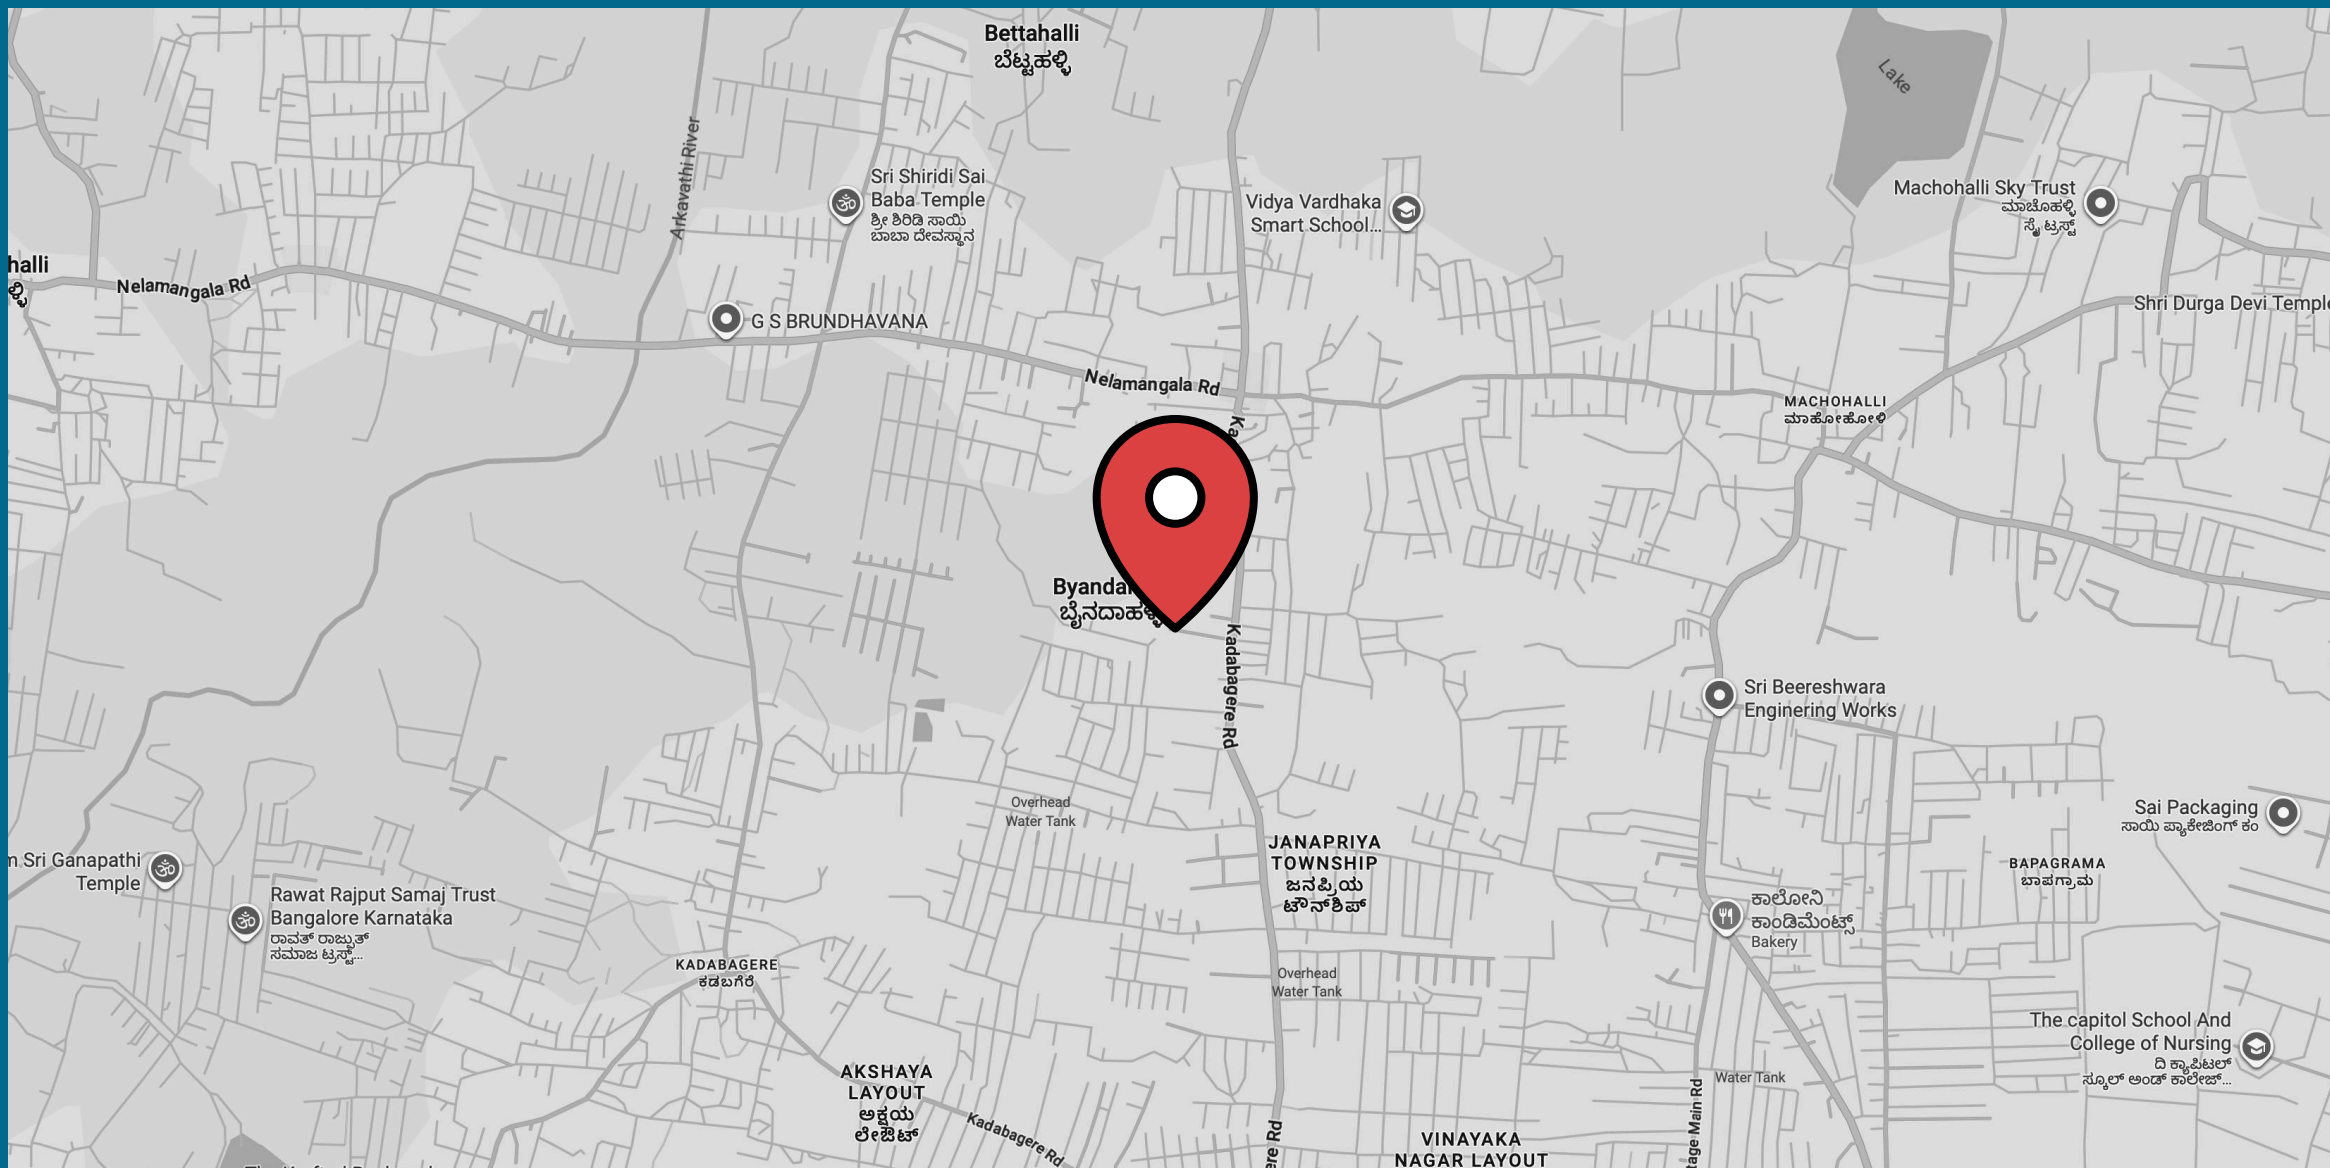

## Upcoming

1. EIC
2. FSSC 22000

# CERTIFICATIONS & LICENSES

# PROCESSING FACILITY

63/2, Byandahalli, Kadabagere Post  
Bengaluru - 562130

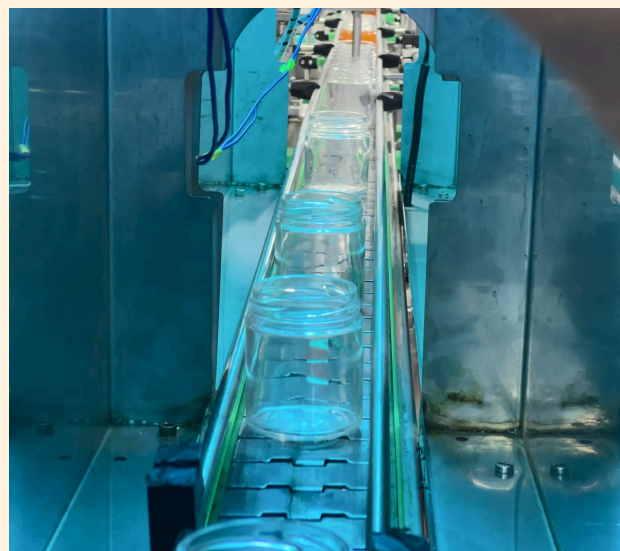

Designed for food-grade processing, the facility follows HACCP-complaint workflows and FSSC 22000-aligned practices, ensuring controlled handling, traceability, and batch consistency. Processes are also aligned to support organic-certified supply chains.

# THE PROCESS

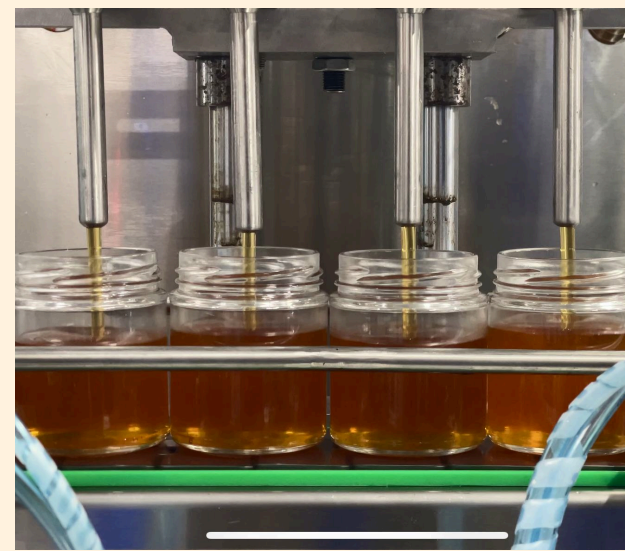

1

The bottles are cleaned through pressurised air and UV Chamber.

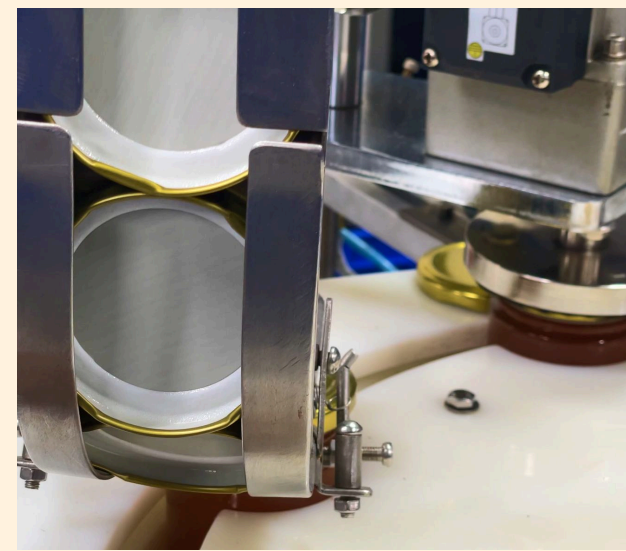

2

Honey is then filled into these bottles with an automated filling line.

3

These bottles are then sent to the automated capping unit.

4

The bottles are checked for quality and are shrink wrapped with sleeves.

5

The bottles are labelled & packed into cartons.

The bottles are first blown with compressed air to remove impurities followed by suction to remove any residual particles.

The bottles are then thoroughly sanitised in the UV chamber.

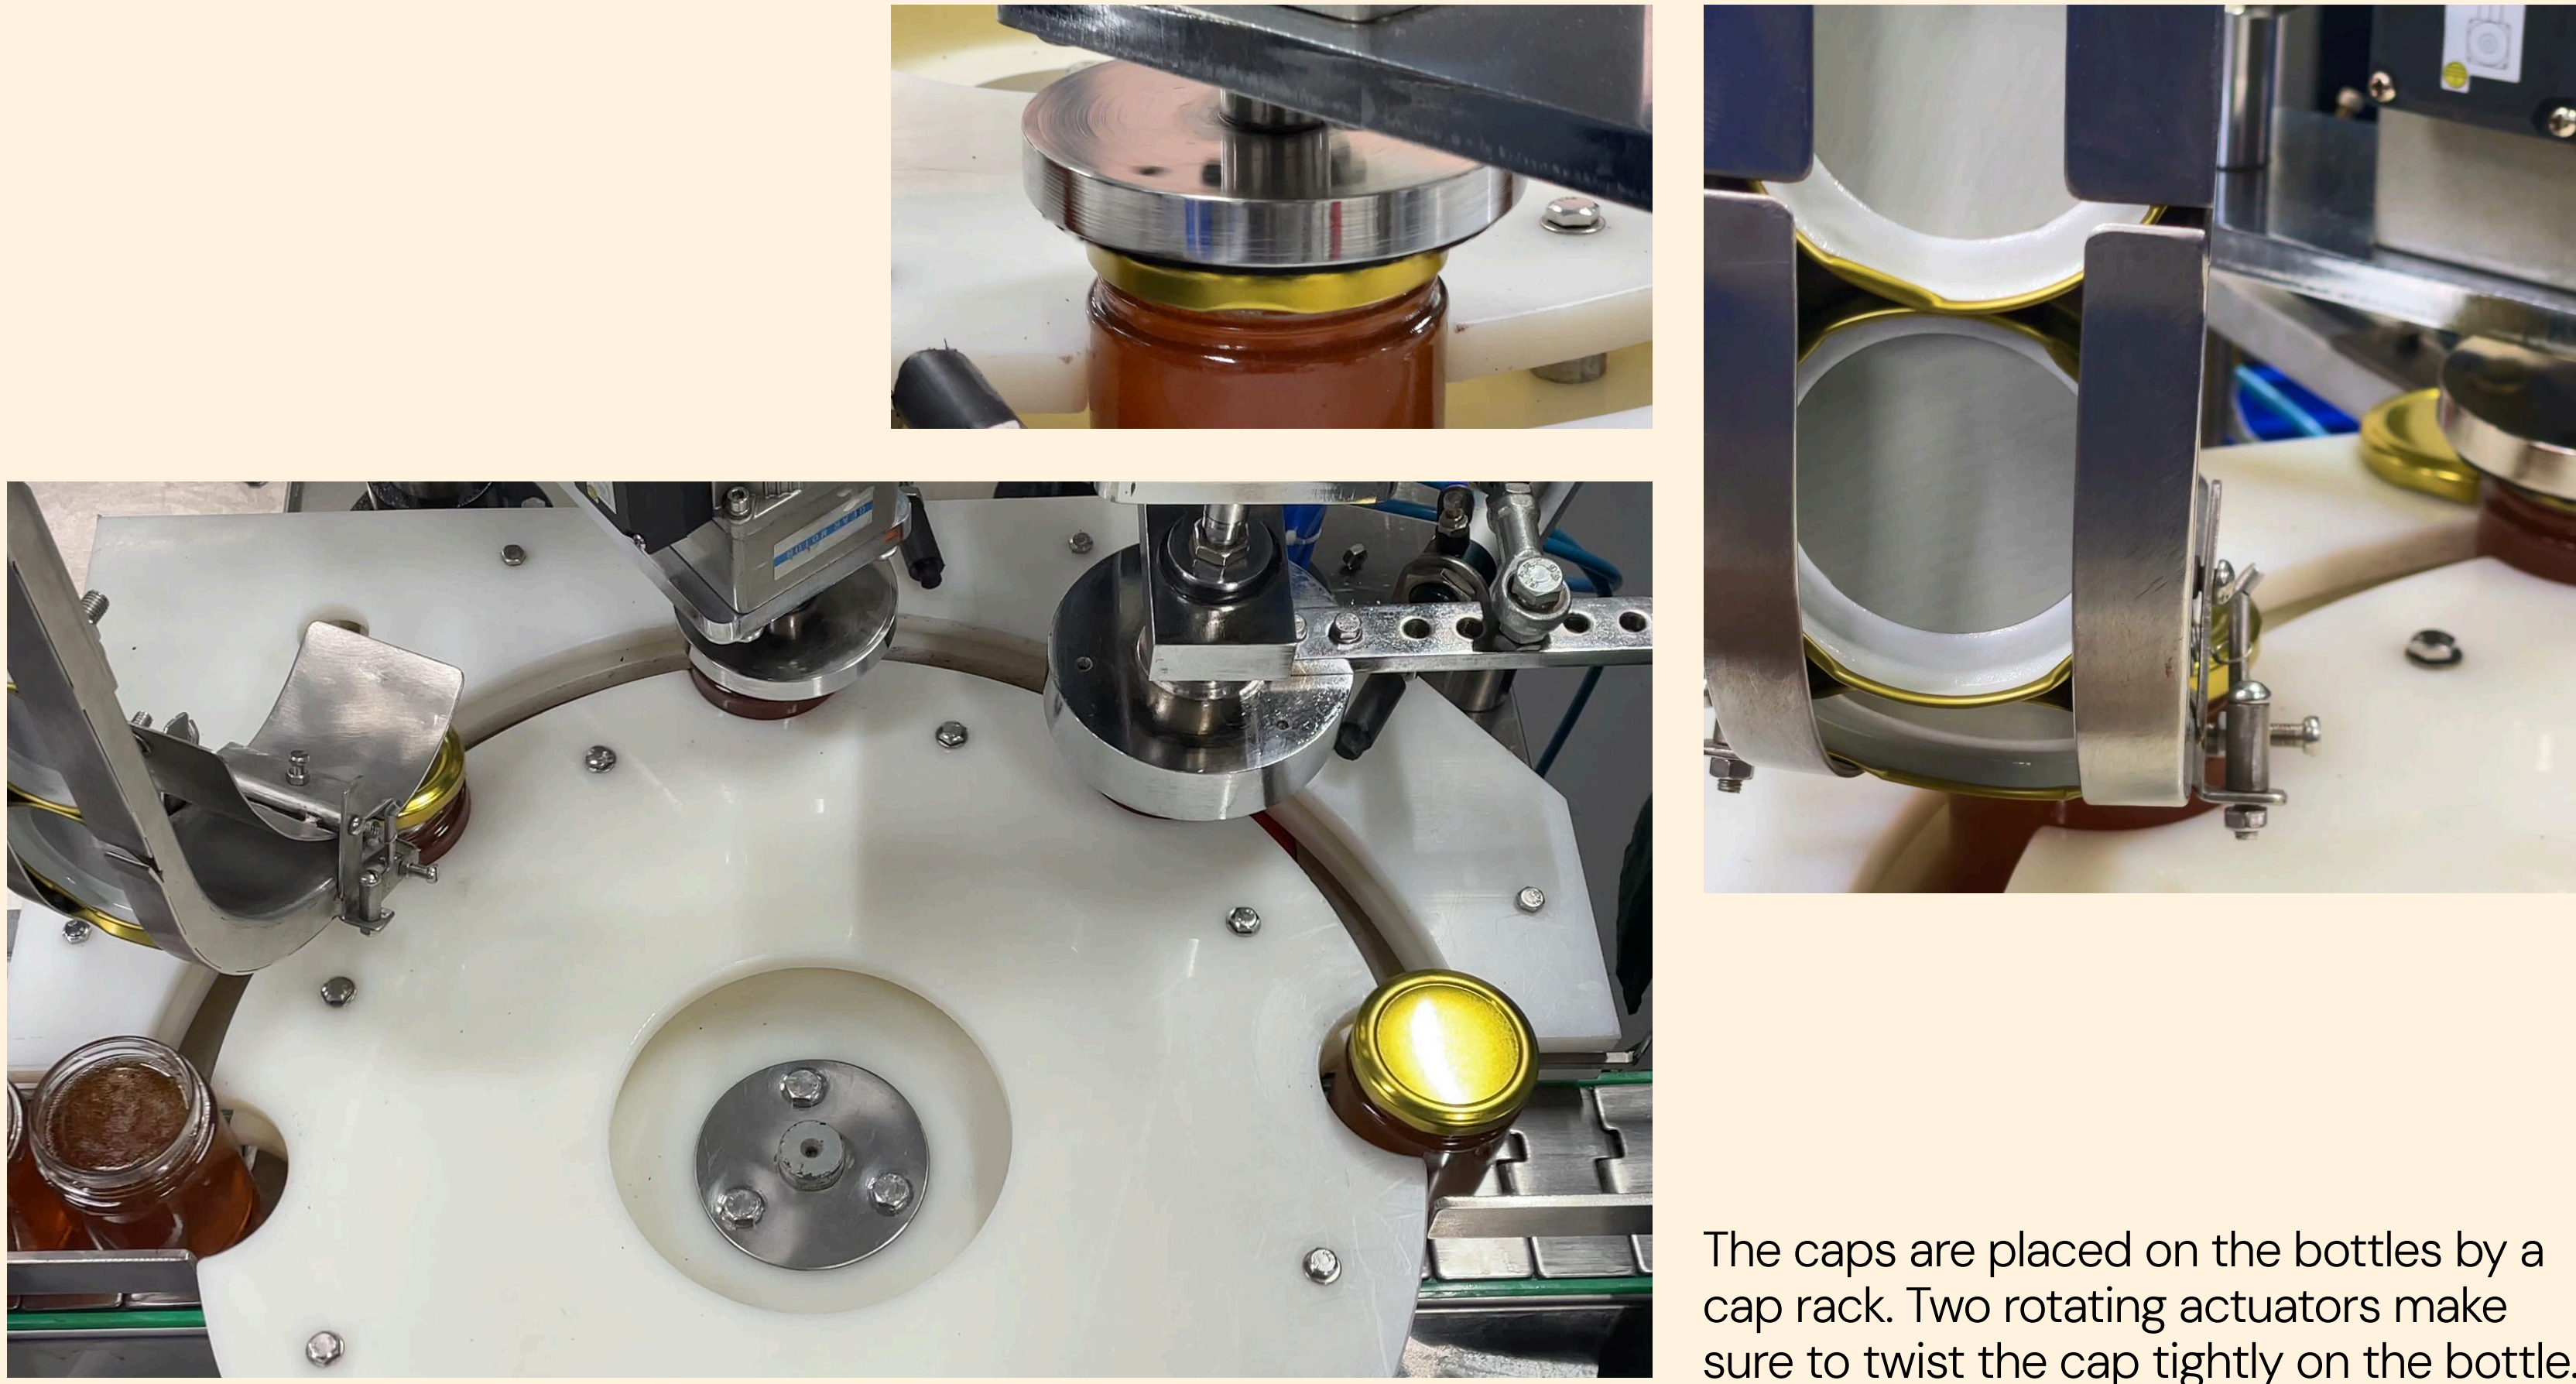

# SANITISING

The bottles are sent to the filling unit. It has 4 nozzles that detect and fill honey in a specified quantity.

# FILLING

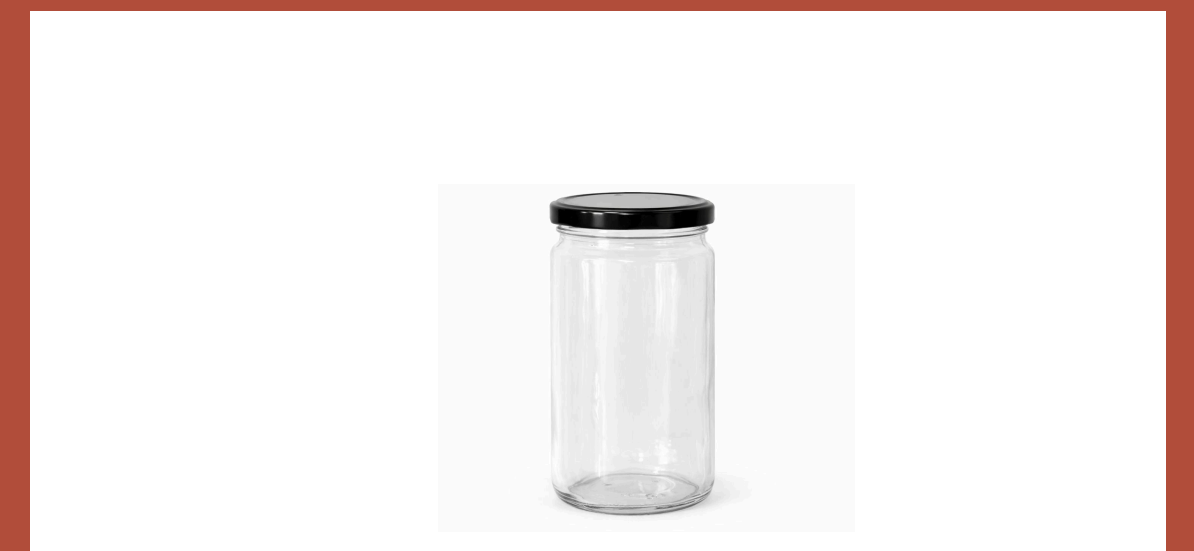

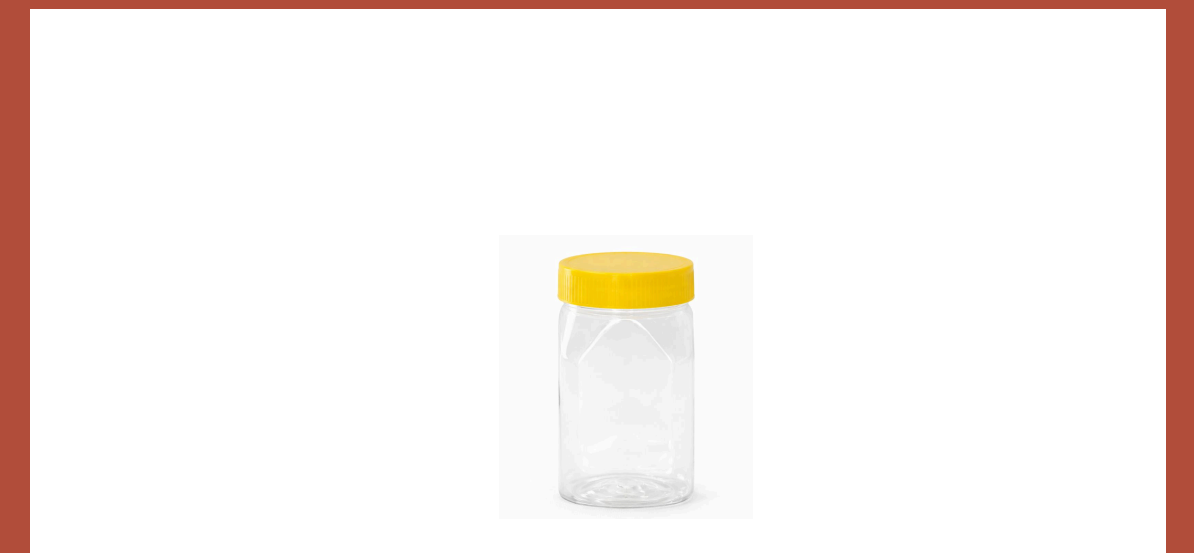

The caps are placed on the bottles by a cap rack. Two rotating actuators make sure to twist the cap tightly on the bottle.

# FINAL PACKAGING

# PACKAGING CAPABILITIES

1. Packaging Capabilities
2. Retail Packs, PET
3. Retail Packs, Glass
4. Bulk Packaging

# PRIVATE LABELLING SUPPORT

What we support →

## 1. Sourcing & Processing

- Honey sourced from controlled apiaries
- Hygienic, food-grade processing
- Quality checks aligned with commercial standards

- Retail pack formats across multiple sizes
- Glass and PET options
- Custom label application
- Carton-level customisation

## 2. Packaging & Labelling

## 3. Compliance Support

- FSSAI-aligned documentation
- Lab testing coordination
- Batch-level records for audit readiness

- Linked sourcing to processing lots
- Structured record-keeping
- Improved transparency across supply chains

## 4. Batch-Level Traceability

## 5. Scalable Volumes

- Capability to support growing order quantities
- Structured production planning
- Designed for long-term commercial partnerships

# BEE FARMS & LIVESTOCK

We do more than just buy honey, we raise the bees that make it.

At HoneyDay Bee Farms, we exercise ground-level control of bee farms and livestock operations, which creates the basis for our honey's quality and consistency.

Our direct experience in running apiaries guarantees that our honey sourcing is organised and traceable and is not subject to market sourcing.

- Ground apiaries operated by well-trained personnel.
- Bees breeding and rearing queens for strong, productive colonies.
- Livestock management: monitoring of colony strength, and seasonal management.
- Disease control: Colony health monitoring via standard practices
- End-to-end traceability advantage: linking apiaries and the processing batches.

# BEEKEEPING RELATED SERVICES OVERVIEW

1

Apiculture consulting

2

Bee farm visits & training

3

Bee breeding & Livestock

4

Managed Bee Farms

# APICULTURE CONSULTING & OPERATIONS

## Includes

- Farm setup & audits
- Colony management
- Disease & pest management
- Training & SOPs
- Yield optimisation

## Service for

- Farms
- Institutions
- CSR programs
- Agri startups

# BEE FARM VISITS & TRAINING

## Visits

- Educational tours
- Corporate & school visits
- Awareness & sustainability programs

## Training

- Introductory beekeeping sessions
- Basic hive handling & safety
- Advanced trainings
- Handholding

# BEE BREEDING & LIVESTOCK

## Includes

- Queen breeding
- Colony multiplication
- Seasonal supply
- Scientific selection

## Service for:

- Commercial beekeepers
- FPOs
- Agri projects

# MANAGED BEE FARMS

## Includes

- Colony Investment & Planning
- On-Site Hive Installation
- Seasonal Management & Harvesting
- Off-Season Relocation & Maintenance
- Bottling & Branding (Optional)

## Applications

- Resorts & eco-retreats
- Golf courses
- Nurseries
- Large farms & estates
